This graph shows a typical gain with a Dynojet jet kit.
STAGE ONE INSTRUCTIONS

1. Remove the vacuum slides from the carbs. Remove the stock needles and spacers, noting order of assembly (Fig.A). Remove the spring (Fig. A) from the needle retainer and clip the plastic mounting stud to half of its original length. Replace the spring. This adds clearance for the Dynojet needle.

2. Enlarge your slide lift holes (Fig. A) using drill bit DD #7/64.
   **NOTE:** The DD #9/64 bit may be used for racing or hard street driving. The picture may not show your slide exactly. Drill only your existing slide lift holes. **Do not drill any new holes or the needle hole.**

3. Install Dynojet needles on groove #2 from the top. Use all stock spacers (Fig. A). Install the small Dynojet washers above the e-clip. After installing the slides in the carbs be sure to check slide movement manually.

4. Remove the stock main jets and replace with the Dynojet main jets provided. If you are running the stock exhaust install the DJ118 main jets. If you are running an aftermarket exhaust or slip-ons with high flowing baffles use the DJ122 main jets. Be sure that the jet you are changing is the main jet (Fig. B).

5. Locate the fuel mixture tab (Fig. B). Remove the float bowls and file off the tab nearest to the screw on the float bowl. This will allow for easier adjustment. Carefully turn the mixture screw clockwise until lightly seated, then back out 2.5 turns.

STAGE TWO INSTRUCTIONS

1. Remove the vacuum slides from the carbs. Remove the stock needles and spacers, noting order of assembly (Fig.A). Remove the spring (Fig. A) from the needle retainer and clip the plastic mounting stud to half of its original length. Replace the spring. This adds clearance for the Dynojet needle.

2. Enlarge your slide lift holes (Fig. A) using drill bit DD #7/64.
   **NOTE:** The DD #9/64 bit may be used for racing or hard street driving. The picture may not show your slide exactly. Drill only your existing slide lift holes. **Do not drill any new holes or the needle hole.**

3. Install Dynojet needles on groove #2 from the top. Use all stock spacers (Fig. A). Install the small Dynojet washers above the e-clip. After installing the slides in the carbs be sure to check slide movement manually.

4. Remove the stock main jets and replace with the Dynojet main jets provided. If you are running the stock exhaust install the DJ132 main jets. If you are running an aftermarket exhaust or slip-ons with high flowing baffles use the DJ136 main jets. Be sure that the jet you are changing is the main jet (Fig. B).

5. Locate the fuel mixture tab (Fig. B). Remove the float bowls and file off the tab nearest to the screw on the float bowl. This will allow for easier adjustment. Carefully turn the mixture screw clockwise until lightly seated, then back out 2.5 turns.
