STAGE ONE INSTRUCTIONS

1. Remove vacuum slide from carbs. Remove stock needles & spacers, noting order of assembly. Locate slide lift holes using (Fig. A), with slide drill DD# 7/64 supplied, enlarge your slide lift holes. The picture may not show your slide exactly, enlarge your slide lift hole or holes depending on your model. Do not drill any new lift holes. Do not drill the needle hole.

2. Remove the spring from the needle retainer. Clip the plastic mounting stud to half of its original length, replace the spring. This adds clearance for the Dynojet needles.

3. Install Dynojet needles on groove# 2, using all stock spacers. Install the Dynojet washers above the E-clip.

4. Remove stock main jets and replace with Dynojet mains provided. If you have a 700 use the DJ114. Use the DJ122 if you have a 750. Be sure that the jet you are changing is the main jet.

5. Locate the Fuel Mixture Plug(Fig. B), if you see a screw head, proceed to adjusting procedure. With the 5/32 drill provided, carefully drill thru the plugs. NOTE: the mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break thru. Use screw provided to secure and remove the plug. Carefully turn mixture screws clockwise until they seat, turn out 2 1/2 turns.
