STAGE ONE INSTRUCTIONS

1. Remove the vacuum slides from the carbs. Remove the stock needles and spacers, noting order of assembly (Fig. A). Using the drill bit (DD #30) enlarge the slide lift holes (Fig. A). The picture may not show your slide exactly. Enlarge the stock slide lift hole(s) only. **Do not** drill any new holes or the needle hole.

2. Remove the spring from the needle retainer (Fig. A). Clip the plastic mounting stud to half of its original length. Replace the spring. This adds clearance for the Dynojet needle.

3. Install the Dynojet needles on groove #2 from the top. Use all stock spacers (Fig. A). Install the small Dynojet washers above the E-clip. After installing the slides in the carbs be sure to check slide movement manually.

4. Remove the stock main jets and replace with the Dynojet main jets provided. If you are using the stock exhaust install the DJ090 main jets. If you are using and aftermarket exhaust or slip-on with a high flowing baffle use the DJ094 main jets. Be sure that the jet you are changing is the main jet.

5. Locate the fuel mixture plug (Fig. B). If you see a screw head at Fig. B then proceed to the adjusting procedure. With the 5/32 drill bit provided carefully drill through the plug. **NOTE:** The mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break through. Use screw provided to secure and remove this plug. Carefully turn the mixture screws clockwise until lightly seated, then back out 2.5 turns.
