STAGE ONE INSTRUCTIONS

1. Remove the vacuum slide from the carbs. Remove the stock needles & spacers, noting the order of assembly. Using the slide drill provided, DD #37 drill your slide lift holes (Fig. A), the picture may not show your slide exactly. Drill your existing slide lift holes only, do not drill any new holes and do not drill the needle hole.

2. Install Dynojet needles on groove #3, using all stock spacers (Fig. A). Install the Dynojet washer above the E-clip.

3. Remove the main jet and replace with the Dynojet main jets provided. Use the DJ100 main jet with stock exhaust pipe, or use the DJ104 main jet with aftermarket header or slip-on with high flowing baffles. Be sure that the jets you are changing are the main jets.

4. Locate the fuel mixture tab (Fig. B). Remove the float bowls and file off the stop tabs nearest to the adjusting tabs on the float bowl, this will allow for easier adjustment. Carefully turn mixture tabs clockwise until seated, then back out 2-1/2 turns.
