This graph shows a typical gain with a Dynojet jet kit.
STAGE ONE INSTRUCTIONS

NOTE: This kit can be installed without removing the carburetor.

1. Remove the top of the carb. Remove the 8mm nut (Fig.A) and pull out the needle retainer assembly and the stock needle. Remove the e-clip from the stock needle, then remove the stock needle from the retainer.

2. Install the e-clip on the Dynojet needle in groove #5 from the top. Install the needle in the slide. Install the small Dynojet washer above the e-clip. Install the stock needle retainer on top of the Dynojet needle, spacer, spring and then the nut (Fig. C).

3. Remove the stock main jet. NOTE: The main jet can be accessed by removing the nut from the bottom of the float bowl (Fig. B). Install the Dynojet main jet adapter (DJA001) into the emulsion tube first, then install the Dynojet main jet provided. If you are running the stock exhaust, install the CJ160 for under 3000 ft. Install the CJ155 main jet from 3000-6000 ft. Install the CJ150 main jet if above 6000 ft. If you are running an aftermarket exhaust or slip-on with high flowing baffle, use the CJ165 main jet. Install the CJ160 main jet from 3000-6000 ft. Install the CJ155 main jet if above 6000 ft. Be sure that the jet you are changing is the main jet.

4. Locate the fuel mixture screw (Fig.B). Carefully turn the mixture screw clockwise until lightly seated, then back out 2 turns.

Fig. A

Remove this nut and the needle.

Fig. B

Fuel mixture screw

Remove this nut to access the main jet

Install the stock needle retainer on top of the Dynojet needle, e-clip and washer.

Fig. C

Place E-clip in groove #5 from the top
