STAGE ONE INSTRUCTIONS

1. Remove vacuum slides from carbs. Remove stock needles and spacers, noting order of assembly (Fig. A).

2. Install the Dynojet needles on groove #3 from the top. Use all stock spacers (Fig. A). Install the small Dynojet washers above the E-clip. **NOTE:** It may be necessary to cut off the top two grooves of the needle to reinstall the stock needle retainer. After installing the slides in the carbs be sure to check slide movement manually.

3. Install the Dynojet slide springs (DSP012) in place of the stock slide springs.

4. Remove the stock main jets and replace with the Dynojet main jets provided. If running the stock exhaust use the DJ165 main jet in the front cylinder and the DJ170 main jet in the rear cylinder. When running an aftermarket exhaust with high flow baffles use the DJ170 main jet in the front cylinder and the DJ175 main jet in the rear cylinder. Be sure that the jet you are changing is the main jet.

5. Locate the fuel mixture plug (Fig. B). If you see a screw head at Fig. B proceed to the adjusting procedure. With the 5/32 drill bit provided, carefully drill through the plugs. **NOTE:** The mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break through. Use the screw provided to secure and remove this plug. Carefully turn the mixture screws clockwise until lightly seated then turn out 3.5 turns.
