WARNING
NO SMOKING!
NO OPEN FLAME!
WHILE INSTALLING YOUR DYNOJET KIT
1. Remove the vacuum slides from carb. Remove the stock needles and spacers, noting the order of assembly (Fig. A).

2. Install the Dynojet needle on groove #3 from the top. Use all stock spacers (Fig. A). Install the small Dynojet washers above the E-clip. **NOTE:** It may be necessary to cut off the top two grooves of the needles to reinstall the stock needle retainer. After installing the slide in the carb be sure to check slide movement manually before air box installation.

3. Remove the stock main jet and replace with the Dynojet main jet provided. If you are using the stock exhaust install the DJ175 main jet in the front cylinder carb and the DJ180 main jet in the rear cylinder carb. If you are using a complete aftermarket exhaust system or a slip-on with a high flowing baffle, use the DJ180 main jet in the front cylinder carb and the DJ185 main jet in the rear cylinder carb. Be sure that the jet you are changing is the main jet.

4. Locate the fuel mixture plug (Fig. B). If you see a screw head at Fig. B proceed to the adjusting procedure. With the plug drill (DD #5/32) provided, carefully drill through the plugs. **NOTE:** The mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break through. Use screw provided to secure and remove this plug. Carefully turn mixture screws clockwise until lightly seated, then turn out 2-3/4 turns.
