The manufacturer and seller make no warranties express or implied which extend beyond the description of the goods contained herein. Any description of this product is for the purpose of identifying it and shall not be deemed to create an express warranty.
1. Remove the vacuum slides from the carbs. Remove the stock needles and spacers, noting order of assembly (Fig. A). Using the DD #37 drill bit provided, enlarge both slide lift holes (Fig. A). **Do not drill the needle hole.**

2. Install the Dynojet main jets provided. If you are running the stock exhaust install the DJ100 main jets. If you are running an aftermarket exhaust or slip-on with a high flowing baffle, use the DJ104 main jets. Be sure that the jet you are changing is the main jet.

3. Install the Dynojet needles on groove #4. Use all stock spacers (Fig. A). Install the small Dynojet washers above the e-clip (2 per needle). After installing the slides in the carbs be sure to check slide movement manually.

4. Locate the fuel mixture plug (Fig. B). If you see a screw head at Fig. B proceed to adjusting procedure. With the 5/32 drill bit provided carefully drill through the plugs. **NOTE:** The mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break through. Use screw provided to secure and remove this plug. Carefully turn mixture screws clockwise until lightly seated, then back out 2-1/4 turns.
