1989-97 Suzuki GSX 750 Katana

For mildly tuned machines using the stock airbox, with stock or K&N filter #SU-7592

For mildly tuned machines using individual filters or velocity stacks. K&N filters #RU-2922
Both stages may be used with a good aftermarket exhaust

4  Main Jet DJ116
4  Main Jet DJ120
4  Main Jet DJ126
4  Main Jet DJ130
4  Main Jet DJ140
4  Main Jet DJ144
4  Fuel Needles DNO356
4  E-Clips DE0001
4  Adjusting Washers DW0001
8  Slide Orifices DCO351
1  Tap DT1024
1  Plug Drill DD #5/32
1  Screw DS0001

This graph shows a typical gain with a Dynojet jet kit.

WARNING
NO SMOKING!
NO OPEN FLAME!
WHILE INSTALLING YOUR DYNOJET KIT
STAGE ONE INSTRUCTIONS
1. Remove the vacuum slides from the carbs. Remove the stock needles and spacers, noting order of assembly (Fig.A).
2. With the tap provided (DT1024) tap both slide lift holes on each slide (Fig. A). Screw the white plastic correctors (DCO351) into the tapped holes. If correctors do not go flush, cut excess off with a razor blade. **NOTE:** For racing or hard street riding you may remove one corrector from each slide for better acceleration.
3. Install the Dynojet main jets provided. If you are running the stock exhaust install the DJ116 main jets. If you are running an aftermarket exhaust or slip-ons with high flowing baffles use the DJ120 main jets. Be sure that the jet you are changing is the main jet.
4. Install the Dynojet needles on groove #3, using all stock spacers (Fig. A). Install the Dynojet washers above the e-clip.
5. Locate the fuel mixture plug (Fig. B). If you see a screw head at Fig.B then proceed to the adjusting procedure. With the 5/32 drill bit provided carefully drill through the plug. **NOTE:** The mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break through. Use screw provided to secure and remove this plug. Carefully turn the mixture screw clockwise until lightly seated, then back out 2.5 turns.

STAGE THREE INSTRUCTIONS
1. Remove the vacuum slides from the carbs. Remove the stock needles and spacers, noting order of assembly (Fig.A).
2. With the tap provided (DT1024) tap both slide lift holes on each slide (Fig. A). Screw the white plastic correctors (DCO351) into the tapped holes. If correctors do not go flush, cut excess off with a razor blade. **NOTE:** For racing or hard street riding you may remove one corrector from each slide for better acceleration.
3. Install the Dynojet main jets provided. If you are running the stock exhaust install the DJ140 main jets. If you are running an aftermarket exhaust or slip-ons with high flowing baffles use the DJ144 main jets. Be sure that the jet you are changing is the main jet.
4. Install the Dynojet needles on groove #4, using all stock spacers (Fig. A). Install the Dynojet washers above the e-clip.
5. Locate the fuel mixture plug (Fig. B). If you see a screw head at Fig.B then proceed to the adjusting procedure. With the 5/32 drill bit provided carefully drill through the plug. **NOTE:** The mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break through. Use screw provided to secure and remove this plug. Carefully turn the mixture screw clockwise until lightly seated, then back out 2.5 turns.

**NOTE:**

1. If you are running a K&N stock replacement air filter you will need to use a main jet that is 10 points larger. If you are using the DJ116 main jets you will need to install the DJ126 main jets. If you are using the DJ120 you will need to install the DJ130 main jet.
2. If experiencing fueling problems below 4,000 rpm under full throttle that the needle can’t fix, try changing the fuel level. If you feel that it is too rich, lower the fuel level. If you feel that it is too lean, raise the fuel level.
3. Always remove the float bowl vent tubes.
